KEEGAN GREEN

MOTIVATED · ADAPTABLE · DEPENDABLE

SKILLSET

Software Engineering

- Python · Pandas, NumPy, SciPy, Plotly/Dash, Kedro, SQLAlchemy, Pydantic, pytest
- Optimization ·
 Pyomo, Cbc, GLPK
- Go
- Git
- Linux
- Docker
- CI/CD
- Relational databases (PostgreSQL) and ORMs
- Grafana
- Machine learning
- MLflow
- · Basic Java
- MATLAB/Simulink and Optimization Toolbox

Control Systems

- Modern optimal and digital control
- Modeling and simulation

Electrical Systems

- Power and signal electronics analysis
- Digital design
- Microcontrollers and single-board computers
- · Real-time systems

WHERE I EXCEL

- Showing initiative in end-to-end problem solving, from conception to deployment
- · Creating reusable, well-tested, and fast software
- Considering all aspects of a problem, from technical to green energy implications

EXPERIENCE

Optimization Engineer

BluWave~ai

2022 – Present Ottawa, ON

- Developed, deployed, and maintained an optimization service to perform city-wide demand response by controlling grid-scale batteries and hundreds of EVs, for an ongoing EV Everywhere program with Hydro Ottawa
 - Created an algorithm that controls EVs' charging to consume power when the energy mix is green
- Developed and deployed software to optimally control a solar-powered hydrogen production and storage system, extending its component lifespan while generating electricity from green hydrogen at high-demand times
- Collaboratively developed, and deployed, a cloud service that sends timely and helpful charging station recommendations to EV taxi drivers based on location
 - Created a real-time simulator of EV taxi fleet operations, showcased at COP28, essential to progressing the pilot project with the taxi company to the next stage
- Developed and deployed prototype optimizers of electric bus charging operations for multiple transit agencies in simulation
 - Created optimization models for peak-shaving and energy cost minimization in a model predictive control scheme, used in a simulation study for many Ontario school bus depots
- Created a library used by multiple projects for testing smart grid control software in a variety of simulated environments
- Created, evaluated, and deployed novel load predictors for Mumbai and Prince Edward Island (which outperformed LGBM by 17%)
- Completed a 10-megawatt peak-shaving study for the city of St. John's grid
- Co-inventor on three patent applications for BluWave's EV Fleet Orchestrator system
- Co-inventor on a patent application for the real-time, data-driven minimization of cost and greenhouse gas emissions with EV charging stations

Systems Engineering Co-op

Jastram Engineering

Sep – Dec 2020 Vancouver, BC

- For steering systems on naval frigates:
 - · Developed documentation for security, safety, risk management, and failure analysis
 - Verified conformance of electrical systems to NATO standardization agreement
 - Successfully performed vibration analysis for hydraulic power units in Python

EDUCATION

BASc Mechatronic Systems Engineering

2016 – 2021 Vancouver, BC

Simon Fraser University

- 3.67 CGPA; President's Honour Roll, three-time Dean's Honour Roll
- 4.33 GPA in statistics and engineering optimization courses

PERSONAL PROJECTS

Simulation of Mid-Air Refueling of a Hydrogen-Powered Airliner

2023 - Present

- Design and <u>feasibility study</u> determining how to refuel a sustainably-powered commercial airliner
- Developed a <u>3D computer simulation</u> of mid-air refueling by AT200 cargo UAVs
- Created a flight controller <u>UI mockup</u>

Author of multiple Python libraries

2024 - Present

 Applications span <u>signal resampling</u>, <u>Pandas/dataclasses interoperability</u>, and ease of writing <u>explainable</u>, <u>traceable</u>, <u>and auditable Python programs</u>

Series About Energy, Renewables, and Climate Change

2022 - Present

 A series of web postings of interesting, significant, and actionable facts and pieces of information about energy, renewables, and fighting climate change

Cluedo Game Simulator and Al Assistant

2023

- Wrote software guaranteed to beat human players at Cluedo by solving the game as a Boolean satisfiability problem
- Made an interactive player dashboard to visualize game and simulation results

IoT Integration of a Hydroponic Farm

2022 - 2023

- Created IoT dashboard and Python-based interface for remote monitoring & control
- Developed a farm process model for minimizing consumption of energy and resources
- Completed the first phase on-time to successfully control the farm across Canada

Energy Yield Model of a Gas Turbine

2021

- Performed statistical analysis and trained machine learning models on sensor data
- · Verified, visualized, and reported model performances

Model of Fuel Cell EV Air Supply System for Optimization

2020

- Identified potential for optimization among car manufacturers
- Defined empirical relationship between fuel cell humidity and performance
- Numerically modeled turbo compressor to feed fuel cell oxygen

Optimization of a Telescopic Handler Mechanism

2020

- Applications in structural engineering and robotics
- Verified and visualized solution to 1000-variable optimization problem obtained using tuned gradient-based and genetic algorithms
